

ABSTRACT

A juvenile seat includes a seat shell having a bottom seat portion and a back support portion coupled to the bottom seat portion and positioned at an angle relative to the bottom seat portion. A headrest of the juvenile seat is coupled to the 5 seat shell and arranged for up and down movement relative to the seat shell above the bottom seat portion of the seat shell. The juvenile seat also includes a height-adjustment mechanism coupled to the headrest for up and down movement with the headrest to adjust the height of the headrest above the bottom seat portion.
